

Week of 8/12/2019 Operations Update

Base-line population of *Culex nigripalpus* is the main driver of the population this week. The stacked-bar graph below shows the total mosquitoes from all traps in the District in white. The red is the sole trap we keep on the West-side of US-1 to monitor outside the District.

A lack of extreme rain events has limited the production of any of the flood-water species of mosquitoes. The graph below shows *Culex nigripalpus* as the main contributor of the daily total population variation.

No Adulticide treatments this week.
