

Week of 9/30/2019 Operations Update

More maintenance spraying of *Culex nigripalpus* this week. The stacked-bar graph below shows the total mosquitoes from all traps in the District in white. The red is the sole trap we keep on the West-side of US-1 to monitor outside the District.

Most of the breeding sites in the District are currently dry (red diamonds). This has the potential to reduce the *Culex nigripalpus* population by eliminating some of their breeding sites.
