

## Week of 5/18/2020 Operations Update

Fire danger is high, a burn ban was instituted by the County at the end of the week. Fourth week in a row of no adulticide treatments. The bar graph below shows the total mosquitoes from all traps in the District.

The deficit of rain is becoming dangerous at this point. Rain for March was almost non-existent while May has produced very little thus far.

NOAA's predictions for June is a 40% chance of above average rainfall according to their May 21 update, illustration below. So we have some chance of seeing a change.
