

Week of 6/28/2021 Operations Update

Extensive adultciding operations were carried out by truck and helicopter this week. The bar graph below shows the total adult mosquitoes from all traps in the District for the past year (TTM).

Mid-April was the last major rain event until the weekend of 6/12-13. The graph below shows the population of the most abundant mosquito species. The population of *Aedes infirmatus* increased sharply approximately ten days post rain event and continued into this week of operations.

Zones highlighted in yellow were sprayed by truck, blocks in blue were treated by helicopter this week.
