

Week of 7/5/2021 Operations Update

This week T.S. Elsa passed by without impacting the area. The bar graph below shows the total adult mosquitoes from all traps in the District for the past year (TTM).

The population of *Aedes infirmatus* returned to elevated levels in the only day of trap data available after Tropical Storm Elsa had cleared the area (chart below).

Zones highlighted in yellow were sprayed by truck this week.
