

Week of 5/23/2022 Operations Update

Low mosquito activity this week. Adulticide treatments this week focused on the mosquito species *Coquilletidia perturbans*. The bar graph below shows the total adult mosquitoes from all traps in the District for the past year (TTM).

The emergence of the permanent-water mosquito species *Coquilletidia perturbans* has begun to taper off (Chart below). Without continued emergence the species will continue to decline.

Zones highlighted in yellow on the map below were sprayed by truck this week.
